

Marmora Pumped Storage Project Continues to Move Forward!

The Marmora Pumped Storage Project Continues to move forward. Thanks to the project's merits and your support, every candidate in the riding of Prince Edward Hastings stated their support for the project leading up the 2011 elections. These days, agreement on an Ontario power project is certainly rare and a testament to the project's value to the community and Eastern Ontario. Pumped storage also became part of the provincial Liberal election platform.

Recently, Northland has been briefing the new provincial decision makers on the project's technical features, favourable energy economics and its significant job creation, eco-tourism and educational benefits for Eastern Ontario.

The Community has shown great support for this project and it has been noted by the province.

Tremendous community support

Community support has become vital to the success of energy projects—and local and county governments, residents and businesses came through in spades in 2011. Every Hastings County municipality endorsed the project, as have all Eastern Ontario counties, through the Wardens' Caucus. The project also received strong support from Loyalist College, Sir Stanford Fleming College and Trent University.

Certainly the most visible—and likely most powerful—show of support has been the sign campaign. We are very grateful to area residents and businesses for signalling their support in this way. **Thank you!**

This level of community support for a power project is unprecedented in Ontario.
